A new law has been passed in the state of California. It means that in California schools, some cereals, baked goods and other products that contain synthetic food dyes will have their days numbered.

California lawmakers have taken an important step by passing a bill to ban six artificial colors in foods served in the state's public schools.

The law that seeks to modify food in California This bill, known as the California School Food Safety Act (AB 2316), now awaits Governor Gavin Newsom 's signature to officially become law.

According to NBC, the initiative presented by Democratic Assemblyman Jesse Gabriel aims to eliminate synthetic dyes that have been linked to neurobehavioral problems in some children. If approved, the law would go into effect in December 2027, making California the first state to ban these additives in school cafeterias.

Gabriel highlighted the importance of looking out for the health and well-being of students, emphasizing that the dyes mentioned are considered "non-essential ingredients" with natural alternatives available, such as turmeric or beet juice.

The banning measure focuses on the colorants Red 40, Yellow 5, Yellow 6, Blue 1, Blue 2 and Green 3. The aim is not to ban specific foods or beverages, but to encourage the substitution of synthetic colorants with safer options.

The main purpose is to decrease children's exposure to these additives, which, according to a study conducted by the California Environmental Protection Agency's Office of Environmental Health Hazard Assessment, are linked to adverse neurobehavioral effects, such as inattention and hyperactivity, especially in sensitive children.

This law has generated controversy due to the involvement of several food companies that will be affected. With the approval of this regulation, they will have to change their component in the products indicated by the State of California.

What does the FDA say about the prohibition of this controversial law in California? Based on the findings in California, the Food and Drug Administration (FDA) has stated that there is no established causal link between synthetic dyes and behavioral problems in the general population of children. However, it is recognized that some children may be sensitive to these additives, so emerging science is being reviewed to ensure the safety of approved dyes.

AB 2316 is in addition to the California Food Safety Act, passed last year and also introduced by Gabriel. This legislation, which bans four food additives, such as brominated vegetable oil and Red 3, will go into effect in January 2027.

It is important to note that constant review of emerging science is critical to ensuring food safety and protecting the health of the population, especially children sensitive to certain additives.
