WASHINGTON, Aug. 16 -- The Environmental Working Group issued the following news release on Aug. 15, 2024:

SACRAMENTO, Calif. -- Today the Senate Appropriations Committee voted to advance a bipartisan bill to ban six harmful dyes from food provided in the state's public schools during regular school hours.

Assembly Bill 2316, by Assemblymember Jesse Gabriel (D-Encino), would ban Red Dye No. 40, Yellow Dye No. 5, Yellow Dye No. 6, Blue Dye No. 1, Blue Dye No. 2 and Green Dye No. 3 from such food.

The dyes have been found to cause neurobehavioral problems in some children.

"California has a responsibility to protect our students from chemicals that harm children and that can interfere with their ability to learn," said Gabriel.

"As a lawmaker, a parent and someone who struggled with ADHD, I find it unacceptable that we allow schools to serve foods with additives that are linked to cancer, hyperactivity and neurobehavioral harms," he said. "This bill will empower schools to better protect the health and well-being of our kids and encourage manufacturers to stop using these dangerous additives."

Last year, Gabriel successfully authored, and Gov. Gavin Newsom signed into law, the California Food Safety Act, which banned potassium bromate, propylparaben, brominated vegetable oil and Red 3 from food manufactured, delivered and sold in the state.

In 2021, the California Office of Environmental Health Hazard Assessment released a study finding that many food dyes and colorants, including the six dyes covered by A.B. 2316, are known to make some children vulnerable to behavioral difficulties and decreased attention.

"Many children rely on school meals as a source of their daily nutrition and calorie intake," said Tasha Stoiber, Ph.D., Environmental Working Group senior scientist. "Kids deserve wholesome foods that don't hinder their ability to learn, and parents deserve the confidence that the schools they're sending their kids to aren't serving them food that may harm them."

EWG and Consumer Reports are co-sponsoring A.B. 2316. The bill will next be heard and voted on by the full State Senate later this month.

Toxic chemicals

Thousands of chemicals are allowed for use in food sold in the U.S. Many that have been reviewed by the Food and Drug Administration have not been reevaluated for decades, even when new science is available. For instance:

* Red 40 has not been evaluated for health risks since 1971. Many studies show it may pose a risk to brain development in children, hyperactivity and even cancer.

* Yellow 5 has been approved for use since 1931. The FDA affirmed its use with good manufacturing practices in 1969.

* Yellow 6 was approved for use in 1931, and the FDA reaffirmed its approval in 1986.

* Blue 1 has been approved for use since 1931. The FDA hasn't taken another look at it since 1969.

* Blue 2 was last approved in 1983.

* Green 3 has been allowed for use since 1931 and hasn't been reaffirmed since 1982.

"Why do schools serve food containing these toxic dyes?" said Melanie Benesh, EWG's vice president for government affairs.

"We know these dyes are harmful, especially to some children. We must safeguard this vulnerable group from exposure at school, where they eat meals and are expected to learn," Benesh said.

"We appreciate Assemblymember Gabriel's efforts to remove these harmful dyes and colorants from these products," she added.

Children have lower tolerance levels to chemical exposure than adults, and their developing bodies make them especially vulnerable.

"These dangerous dyes should not be allowed in foods sold in schools, because they put kids at risk for hyperactivity and other neurobehavioral issues," said Brian Ronholm, director of food policy at Consumer Reports.

"Removing these harmful dyes from school foods will protect the health and well-being of kids in California. Consumer Reports applauds Assemblymember Gabriel for introducing this critical food safety legislation," he added.

Consumers consistently rank food chemical concerns ahead of other food safety issues. But the FDA does not adequately regulate additives.

"The FDA continues to fail to keep us safe from harmful chemicals in our food," said Benesh. "In the absence of federal leadership, states like California keep stepping up to ensure our safety from toxic chemicals in snacks and other food we and our families enjoy."
