The California legislature passed the first bill to ban food additives in the United States. As a result, four chemicals could no longer be used in beverages and foods.

First US state to create this type of law. This would be the first time a U.S. state has passed such a bill, which seeks to ban four chemicals that are compromising the health of Americans.

Should Gavin Newsom, the Democratic governor of California, approve Bill 418, the sale of foods and beverages containing red dye No. 3, potassium bromate, brominated vegetable oil and propylparaben will be banned as of 2027.

This is the first time a state has banned food additives, despite being approved by the Food and Drug Administration.

Although these four chemicals are illegal by the European Union and other countries around the world, in the U.S. they could still be found in products such as in "orange soda, icings, hamburger buns, candy and processed foods," writes NBC News on its website.

Jesse Gabriel was the one who presented the project in the U.S. Assembly along with Buffy Wicks, and for them it is a victory for public health, since these four additives are available in foods aimed at children. In addition, they are easily accessible to low-income people.

"This will make our food supply much safer," Gabriel told NBC News. "This will give parents more confidence that when they buy food at the grocery store, they don't have to worry that there's something in there that's dangerous for their children."
